EXPERIENCE

I have been contributing to applied consciousness sciences for over thirty years, collaborating with eminent scientists and educators - internationally - facilitating both objective and experiential research. As a consciousness coach I discovered a way to change how people pay attention allowing access to their combined intelligence with many known applications: physical and psychological healing; effective decision making; creative problem solving in relationships, communities, politics and business; as well as optimum performance in sports or any type of collaborative activity including the potential for collective 'unity' consciousness.

After five years of facilitating attention management and group intelligence, I chose to investigate if the whole of humanity might be orchestrated by how we pay attention. From 1988 to 1993 I worked with an award winning experimental psychologist, Dr. William Braud, through the Mind Science Foundation (MSF), a 58-year old privately endowed institute based in San Antonio, Texas - utilizing a multi-disciplinary approach to the scientific study of the human mind and its potential. I contacted Dr. Braud to discover if he would be interested in co-facilitating a series of studies using a one-way closed circuit camera monitor system to test if focused attention might be measurable - as a stimulus - under double blind conditions. He assigned me to train subjects to experience interconnectedness for the second of two rigorously controlled studies that we designed and co-authored.

After being taught how to experience their interconnectedness we found (*when participants had no known way of knowing when-or-if they were being stared at over a one-way closed circuit camera monitor system*) their autonomic nervous system responses changed in highly significant ways to attention-based stimuli.

I published my first peer-reviewed article, "Promoting health and well-being through a sense of connectedness" with the help of Dr. Beverly Rubik through the Center for Frontier Sciences at Temple University in Philadelphia, PA. That same year I shared authorship with Dr. Braud on a research paper detailing our first study: "Electro-dermal correlates of remote attention: Autonomic reactions to an unseen gaze." Published in the Proceedings of Presented Papers: 33rd Annual Convention of the Parapsychological Association.

In 1990, with Dr. Braud's help, I launched the Human Connection Project (HCP): a large-scale, spiritually-inspired, multi-national, scientifically-based, action-research media project designed to reinforce the underlying sense that human beings are innately linked - even when in widely-separated geographic locations. To further strengthen the significance of our findings, I chose to employ five neuroscientific brain-research facilities to test distance as a factor, and to find if the studies we had already conducted would be confirmed by independent researchers.

If large scale experiments continue to validate our findings, international multi-cultural audiences will be shown split-screen images (*specifically prepared for popular television news programs*) of physiological interactivity between-and-among well known celebrities, Buddhist monks and Aikido masters located in separate geographic locations to find if subtle changes in person-to-person mind/body interaction measurably affect TV audiences - heightening public interest.

Next, Dr. Braud introduced me to leading researchers in the field. Then HCP was sponsored by MSF from 1990 to 1992 and we co-authored our second study in the series: "Further studies of autonomic detection of remote staring: Replications, new control procedures, and personality correlates." Proceedings of Presented Papers: 35th Annual Convention of the Parapsychological Association. These studies led to multiple replications by many independent laboratories, including Scientific Applications International Corporation (SAIC) - a contractor for the United States Department of Defense (USDOD).

That same year (1992), I presented the Human Connection Project at the United Nations for the Dag Hammarskjöld Lecture Series. The following year, Rhea White, editor in chief of the Journal of Exceptional Human Experience (EHE), published my second article: "The Human Connection Project: Educating for Peace through Planetary Consciousness." And, to receive non-profit support, I founded the Human Connection Institute (HCI) in 1994.

I continued facilitating experiences for interested individuals and organizations, alerting an international community of eminent scientists including educators, healers, artists, filmmakers and other professionals - exploring collective attention - to help support the emergence of a commonly sensed intelligence. My hypothesis has been: The self-isolating mind-set of humanity can be beneficially altered by focusing attention - on what can be sensed – individually and collectively.

By presenting scientific demonstrations of nervous system interactivity among spatially separated people the HC Project has offered an alternative to the current scientific worldview - in which humans are considered physically isolated beings. To further this theory, I developed educational methods, seminars, group biofeedback techniques, media presentations and film treatments (with an award winning filmmaker) for families, schools, communities, corporate management and governmental organizations - with application in sports, arts, and public services. These easily learned (*yet little known*) methods demonstrate and encourage a remarkable form of human communication, facilitating lasting-experiences of interpersonal alignment, group insight and co-creative activity.

In 2004, I attended the Zaki Gordon School of Independent Filmmaking to invent new ways to induce group consciousness using film and video. I conducted many groups (*involving more than two thousand hours of video work*) to discover how to elicit shared sensitivity (*inductively*) using a pre-recorded medium. Train the trainer programs were created to unite both cast and crew with the intent of 'causing' a breakthrough into 'conscious filmmaking' – for popular mainstream entertainment.

From 2011 to 2013, I offered up to three, free, weekly groups online (*which were broadcast and recorded on youtube*) to determine how participants (*as well as viewers of these pre-recorded events*) could achieve and sustain the benefits of a shareable intelligence - including how to affect theatre audiences - to guide the production and direction of a series of films and related media.

At the start of 2012, I entered into a collaboration to co-direct HCI, Caribbean Integral Institute, Conscious Intelligence Institute, and Aradne Institutes providing a series of transformational programs for individuals living and working in community, including corporate and governmental organizations, contributing to (ACS-N) Applied Consciousness Sciences Network - developing partnerships among a diverse group of organizations and individuals.

EDUCATION

1970 Wilton High School, Wilton, Connecticut - with Honors

1970-72	Antioch College, Yellow Springs, Ohio Anthropology, Bio-Physics, Creative Writing
1970	Metropolitan Learning Center, Portland, Oregon Studying Education as a Teacher's Aide
1972-73	Maryland Art Institute, Baltimore, Maryland Painting, Drawing, Sculpture, Photography and the History of Ideas
1973-74	New York Studio School, New York City, NY Painting, Drawing and Sculpture
1974-75	New School for Social Research, New York City, NY Physics, Psychology, Philosophy and Dream Analysis
1975-76	Southern University of New York (S.U.N.Y) Split-major, Bachelor of Science and Bachelor of Fine Arts
1976	Skowhegan School of Drawing, Painting and Sculpture Fine Art Scholarship
1977-78	Naturopathic College, Santa Fe, New Mexico Sensory Awareness, Massage, Iridology and Homeopathy
1978-79	City College, San Francisco, CA. Physical Mechanics, Electronics and Scriptwriting
1980-81	University of Tasmania, Australia Theoretical Physics
2004-05	Zaki Gordon School of Independent Filmmaking

CONFERENCES

Invited presentation and published proceedings, Foundations of Mind (I and II) conferences, UC Berkeley, 2014 and 2015

Interviewed for feature documentary, The Secret of Dr. Grinberg, on the life and work of Dr. Jacobo Grinberg Zylberbaum by Ida Cuellar (2011)

Invited guest of Bhagavan and Amma, Golden City, India, at Oneness University, as a consciousness coach - to train male and female monks - for a month (2005).

Invited guest and presenter at the opening of The Global Village (*an International Healing Center*) in Bagni di Lucca, Italy, hosted by Dr. Nitamo Montecucco (1998)

Invited guest of Dr. Ervin Laszlo, presenting the Human Connection Project at the opening of the Club of Budapest, Hungary (1998) and another gathering (2001).

Presenter for the Mind Science Foundation on the Human Connection Project at the Centenary Louisa Rhine Conference, at Duke University (1995)

Consultancy to the World Business Academy, New York City Chapter (1993-1994)

Presenting the Human Connection Project at the United Nations - Dag Hammarskjöld Lecture Series (1992)

Invited presentation on Human Connection Project at the Estrian Workshop In Ontario, Canada (1991)

Invited presentation on the Human Connection Project at the Association for Research and Enlightenment (ARE) in Virginia Beach (1990).

Presenter at the Mind Science Foundation, San Antonio, TX, for participants in a controlled laboratory study on remote mental influence (1989)

RESEARCH

Interconnectedness and consciousness appear to be complementary. Conscious awareness connects perceptions with actions. Over 600 million years we grew from single-cells into multi-cellular creatures by attending to the indivisible nature of

existence - as life its Self. Over the course of evolution, our interconnectedness has supported the development of both individual and species-wide self-awareness, self-motivation and self-organization for countless forms of emerging life. Today, this 'self-same' process supports all complex changes taking place in humanity.

Individual and collective attention is too-often solely organized by ideas and activities. Once our awareness is overly identified with these fragments of a greater whole, a mind-made personality tries to take control of these pieces of experience to create a "peace" that is missing. Yet, this trying is futile and goes on endlessly, as the mind promises to make life behave the way it imagines it should. When overly occupied and identified with the knowledge of these thoughts and things our minds cannot begin to know the underlying integrity of awareness itself.

Our best qualities can be amplified far beyond what most have yet to experience, simply by paying attention-to-attention itself. As cells in the body of humanity our creative freedom, love and understanding rely on how well we pay attention. And what we pay attention to determines who and what we experience ourselves to be. We 'suffer' both attraction and avoidance - as pleasure and pain - whenever we do not 'embody' the whole of existence in an undivided way.

Through meditative habit our perceptions become more organized allowing for greater understanding, motivation and intelligence. As the perceptual faculties of a greater body, heart and mind, we each can feel "one with all" wherein mutual understanding is effortless. It is thrilling to feel what it is like to be another and oneself when awareness is known as who and what we are - changeless and the cause all change. When we relax and do not to seek our immortal nature in what is impermanent, love is felt to flow within us - as a form of conscious intelligence.

APPLICATIONS

In sports, athletes talk about "being in the zone" and of "going with the flow" referring to those moments when team members are so aligned with their own individuality as well as with each other that they play as one synchronous whole. Similarly, the precision of a symphony orchestra is a reflection of the underlying connection and shared purpose of its performers. In business, most successful entrepreneurs attribute their achievements throughout their careers to remarkable instances of teamwork. Moreover, paying attention together is essential to success in every area of human endeavor. The Human Connection Institute has found that developing a person's sense of connection with others improves their ability to adapt more creatively to personal, organizational and environmental change. The successful use of our programs in corporations, educational institutions and communities has strengthened greater familiarity and trust among people.

Increasing the level of cohesion in groups improves performance, quality of work and quality of life. Individuals and groups learn to be led by an intelligence far greater than any one of its members. Challenges are resolved, better decisions are arrived at more rapidly - by-passing hours of meeting time. Uniquely talented individuals are better able to incorporate the skills of others, inspiring and motivating their teammates to be more focused and productive. Sharing 'collective attention' develops a group's ability to produce whatever its members intend. Agreement is easily reached. Any interested and willing group can achieve deep rapport, creativity and acceptance. In a conscious culture everyone knows their input is both welcome and essential. Our business environments must now adapt to accelerating technological development, interdependence, information flow and creative diversity among professionals. Fast-moving companies are learning to embrace change as a way of life.

The Human Connection Institute offers a common ground for people with different skills and perspectives to productively collaborate. Our programs enhance the productivity of any community. As trainers we are dedicated to accessing the genius of individuals and groups in every area of human endeavor. As a member of Applied Consciousness Sciences Network (ACS-N) our partnerships are inspiring and training the next generation of conscious leaders. Our strength of character comes from an awareness that is shared with everyone around us. Understanding our own innate potential and that of our colleagues, grants us an ability to adapt to a broad range of conditions, motivating one another through a commitment to achieving our goals. Helping others helps us develop the confidence and conviction about what is clearly an innate human capacity.

VISION: THE WHOLE IN EVERY ONE

Did you know we could easily send our planet into a tail-spin of destruction unless we find a way to change our selves? Are you aware of the undeniable evidence that the whole of humanity is linked physiologically and psychologically? Imagine accessing this capacity to handle our social and environmental challenges. No need to imagine it, we now have the ability to access our combined intelligence.

As an experiential scientist and founder-director of the Human Connection Institute, I came to realize the whole of humanity functions like a collection of cells. In an individual, millions of nerve cells have to be stimulated-together to produce a single-conscious perception. To wake up before we "hit the wall" millions of us will need to tune-in to our capacity for being conscious - as a collective. As humanity awakens, this will eliminate poverty, pollution, disease, crime and war.

My research has shown that our interconnectedness is more than sufficiently intelligent to handle social and environmental challenges, especially those due to less-conscious habit patterns. I have found consciousness is readily accessible and sustainable by any group of interested and willing individuals – including those who have never been able to meditate successfully. By simply being curious together, people have been able to realize their suffering and insecurities only happen when their mind is convinced of a false sense of separateness. As awareness becomes aware of itself we recognize a "knowing presence." We learn that sharing undivided attention is indistinguishable from unconditional love. I have come to accept that this more organized form of consciousness is our greatest innate (*yet largely untapped*) resource. Once our consciousness is allowed to organize itself in this way - via this naturally-occurring bio-feedback loop - problems vanish, as if they never existed.

"All Ways One" (*Film Sketch*) is the first in a series of films designed to induce shared experiences of unity consciousness in viewers (*Feature Film Outline*). I have found that whenever collective-attention is focused on-and-through-itself, shared feelings spread throughout an entire audience. To back this up, scientifically derived ('seeing is believing') images of interconnectedness will be presented via news reports, print media, talk show formats and feature documentaries. Eminent scientists and educators have agreed to serve on the advisory board and in some cases direct one of five neuroscience laboratories involved - some of which are located in different countries. The intent of this film, future films, and related media will be to help shift the separatist mindset of humanity, so 'the one we all are' is felt and thought intuitively by every human being (*LogLine/OneSheet*).

ARTWORK

My parents were both fine artists and all their friends were artists. My father was a celebrated landscape painter, whose legacy includes thousands of works of art. My mother was a watercolorist, photographer and preservationist securing the first National Historic Site in the United States - to honor American Art and Artists.

As a visual artist I have painted and shown my artwork in many parts of the world, including four years in Australia and a year in South America. My childhood home is now the Julian Alden Weir National Historic Site located in Wilton and Ridgefield, Connecticut. I have been creating, showing and selling my artwork for forty years. My paintings are owned by both public and private collections - internationally. After years of representational and figurative painting, I chose to spend decades developing my own style as an abstract artist. <https://flowvella.com/s/22rf>

RECOMMENDATIONS

"The remarkable work of Sperry Andrews and the Human Connection Institute in developing the psycho-technologies to move people into collective and global consciousness is worthy of wide recognition and attention. As we move from me to we, Sperry's work will serve as a guiding light." John Gardiner, Professor of Leadership at Seattle University, hired Sperry as a Business Consultant in 1999.

"Sperry Andrews' approach to facilitating collective and mindful group consciousness is vital for bringing together and empowering people in everyday venues, as well as in business settings and corporate cultures. I have experienced first-hand how simple yet powerful Sperry's approach is, and how it can easily be applied across diverse settings and populations. His process enables insight to spontaneously arise in a spirit of openness and conscious communication that facilitates people moving forward to implement creative solutions to individual and group movements. I wish every person, business, and corporate culture would integrate and implement Sperry's work into the everyday hum of both workplace culture and personal life. His work encourages interactive, energetic, and authentic communication and creativity to emerge effortlessly." - Richard Miller, PhD. Psychologist, President of the Integrative Restoration Institute

"Sperry's personal integrity reflects in his business activities. I've known him to stay true to this vision - for the good of all. Sperry is creative, intelligent, personable and has consistently been a pleasure to work with." Top qualities: Personable, High Integrity, Creative: Terry Peterson hired Sperry as a workshop leader, creative visionary and humanitarian in 2011, and hired Sperry more than once.

"Sperry's conversational process is innovative and profoundly useful for anyone looking to move out of an individual contemplative practice into relationship and community. He is experienced, dedicated and generous. I wholeheartedly encourage people to experience the work for themselves." Year first hired: 2011 Top Qualities: Expert, High Integrity, Creative. Jocelyn Rasmussen (Founder at More Than Singing, LLC, More Than Speaking, LLC)

"Sperry Andrews is an intuitive and passionate researcher in the non verbal mechanisms of human communication and shared consciousness. He has spent a lifetime mastering these techniques and effectively training others." Marc Chabot, Art Teacher and Consultant, Weir Farm Nat. Historic Site, Ridgefield, CT.

"Sperry and I work at raising individual and group intelligence – supporting the development of conscious organizations and communities - forming partnerships in the field of applied consciousness sciences – worldwide – to help create a sustainable future." Carlo Monsanto, Researcher/Educator, Provost: Vetha, Center for Transdisciplinary Studies, Inc.
