

James E. Beichler, PhD has taught physics, mathematics, and the history of science at the university and college level for more than four decades. He earned his PhD in both theoretical parapsychics and biopsychophysics in 1999 from the Union Institute and University; described as 'the scientific study of the relation between stimulus and sensation, inclusive of paranormal activity as it applies to physical phenomena.'

He is dedicated to bettering the human condition through education and responsible technological applications, conducting advanced theoretical research in cosmology and physics. This includes understanding human consciousness while contributing to historical studies into the development of modern physics, non-Euclidean geometries, and the scientific and cultural attitudes toward the concept of human consciousness.

He submits, the human condition improves and progresses through increasing our understanding of nature. He does not separate science from its history, seeing them as one and the same; i.e., science is its history.

He has shown relativity and quantum theory to be compatible, written and published seventy theoretical essays as well as several books which can be found and downloaded from Academia.edu. Dr. Beichler was elected President of the Academy for Spiritual and Consciousness Studies Inc (ascsi.org) in 2018 and is editor of their Journal and newsletter (*JASCS* and *The Searchlight*) through which he hopes to further his cause of raising the level human consciousness, individually and collectively, to the level of spiritual enlightenment.

Beichler and Andrews have been collaborating on pioneering a single-field model for the past five years. Dr. Beichler is President of the Academy for Spiritual and Consciousness Studies Inc (ascsi.org) and is editor of their Journal and newsletter. Cell Phone: (740) 350-4555 E-mail: jebco1st@aol.com
